

DATA VISUALIZATION WITH GGPLOT2

qplot

Up to now

- `ggplot()`
 - Base data layer
 - Aesthetics
 - Add geom layers
- Easy, quick & dirty: `qplot()`

ggplot()

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width)) +  
  geom_point()
```

qplot()

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width)) +  
  geom_point()  
  
> qplot(Sepal.Length, Sepal.Width, data = iris)
```

base

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width)) +  
  geom_point()  
  
> qplot(Sepal.Length, Sepal.Width, data = iris)  
  
> plot(iris$Sepal.Length, iris$Sepal.Width)
```

base - formula notation

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width)) +  
  geom_point()  
  
> qplot(Sepal.Length, Sepal.Width, data = iris)  
  
> plot(iris$Sepal.Length, iris$Sepal.Width)  
> plot(Sepal.Width ~ Sepal.Length, data = iris)
```

shape = Species

```
> qplot(Sepal.Length, Sepal.Width, data = iris, shape = Species)
```

size = Species

```
> qplot(Sepal.Length, Sepal.Width, data = iris, size = Species)
```

col = Species

```
> qplot(Sepal.Length, Sepal.Width, data = iris, col = Species)
```

geom argument

```
> qplot(Sepal.Length, Sepal.Width, data = iris, col = Species,  
        geom = "jitter")
```

position argument

```
> qplot(Sepal.Length, Sepal.Width, data = iris, col = Species,  
        position = "jitter")
```

alpha

```
> qplot(Sepal.Length, Sepal.Width, data = iris, col = Species,  
        position = "jitter", alpha = 0.5)
```

alpha

```
> qplot(Sepal.Length, Sepal.Width, data = iris, col = Species,  
        position = "jitter", alpha = I(0.5))
```

iris.tidy

```
> str(iris.tidy)
'data.frame': 600 obs. of  4 variables:
 $ Species: Factor w/ 3 levels "setosa","versicolor",...: 1 1 1 ...
 $ Part   : chr  "Sepal" "Sepal" "Sepal" "Sepal" ...
 $ Measure: chr  "Length" "Length" "Length" "Length" ...
 $ Value  : num  5.1 4.9 4.7 4.6 5 5.4 4.6 5 4.4 4.9 ...
```

Continuous vs Categorical

```
> qplot(Species, Value, data = iris.tidy, col = Part)
```

position = "jitter"

```
> qplot(Species, Value, data = iris.tidy, col = Part,  
        position = "jitter")
```

Jitter manually

```
> posn.j <- position_jitter(0.1)
> qplot(Species, Value, data = iris.tidy, col = Part,
        position = posn.j)
```

Comparison

```
> posn.j <- position_jitter(0.1)

> # qplot
> qplot(Species, Value, data = iris.tidy, col = Part,
        position = posn.j)
Fine for easy plots

> # ggplot
> ggplot(iris.tidy, aes(x = Species, y = Value, col = Part)) +
  geom_point(position = posn.j)
Very flexible
```

DATA VISUALIZATION WITH GGLOT2

Let's practice!

DATA VISUALIZATION WITH GGPLOT2

Wrap-up

Two main things

- Grammatical Elements
- Aesthetic Mappings

Grammatical Elements

<i>Article</i>	<i>The</i>	<i>A</i>	<i>The</i>
<i>Adjective</i>	<i>quick brown</i>	<i>rabid red</i>	
<i>Noun</i>	<i>fox</i>	<i>fox</i>	<i>Hunter</i>
<i>Verb</i>	<i>jumps</i>	<i>bit</i>	<i>shot</i>
<i>Preposition</i>	<i>over</i>		
<i>Article</i>	<i>the</i>	<i>the</i>	<i>the</i>
<i>Adjective</i>	<i>lazy</i>	<i>friendly</i>	<i>rabid red</i>
<i>Noun</i>	<i>dog.</i>	<i>dog.</i>	<i>fox.</i>

Grammatical Elements

Geometries

Aesthetics

Data

Grammatical Elements

Aesthetic Mappings

- How to map variables onto aesthetics
- Aesthetics = scales = encoding elements
- Which variable?
- Which variable for which aesthetic?

iris

- **iris** Species Sepal.Length Sepal.Width Petal.Length Petal.Width
 - **iris.wide** Species Part Length Width
 - **iris.mixed** Species.Part Length Width
 - **iris.tidy** Species Part Measure Value
-
- Choice of data format depends on desired plot!

Aesthetics - Continuous Variables

Aesthetics - Categorical Variables

Common plot types

- Scatter plots
 - points, jitter, abline
- Line plots
 - line
- Bar plots
 - histogram, bar, errorbar

Attribute

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width)) +  
  geom_point(col = "blue")
```

Aesthetic

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width)) +  
  geom_point(col = "blue")
```

position = "jitter"

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width, col = Species)) +  
  geom_point(position = "jitter")
```

geom_jitter

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width, col = Species)) +  
  geom_jitter()
```

Manual jitter

```
> posn.j <- position_jitter(0.1)
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width, col = Species)) +
  geom_point(position = posn.j)
```

Diamonds

```
> ggplot(diamonds, aes(carat, price)) +  
  geom_point(alpha = 0.1)
```

Scales

```
> ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width, col = Species)) +  
  geom_jitter() +  
  scale_colour_brewer(palette = "Dark2")
```
