

INTERMEDIATE R

lapply

NYC: for

```
> nyc <- list(pop = 8405837,  
              boroughs = c("Manhattan", "Bronx", "Brooklyn",  
                           "Queens", "Staten Island"),  
              capital = FALSE)  
  
> for(info in nyc) {  
  print(class(info))  
}  
[1] "numeric"  
[1] "character"  
[1] "logical"
```

NYC: lapply()

```
> nyc <- list(pop = 8405837,  
              boroughs = c("Manhattan", "Bronx", "Brooklyn",  
                           "Queens", "Staten Island"),  
              capital = FALSE)  
  
> lapply(nyc, class)  
$pop  
[1] "numeric"  
  
$boroughs  
[1] "character"  
  
$capital  
[1] "logical"
```

Cities: for

```
> cities <- c("New York", "Paris", "London", "Tokyo",  
             "Rio de Janeiro", "Cape Town")  
  
> num_chars <- c()  
> for(i in 1:length(cities)) {  
  num_chars[i] <- nchar(cities[i])  
}  
  
> num_chars  
[1]  8  5  6  5 14  9
```

Cities: lapply()

```
> cities <- c("New York", "Paris", "London", "Tokyo",  
              "Rio de Janeiro", "Cape Town")
```

```
> lapply(cities, nchar)
```

```
[[1]]
```

```
[1] 8
```

```
[[2]]
```

```
[1] 5
```

```
...
```

```
[[6]]
```

```
[1] 9
```

Cities: lapply()

```
> cities <- c("New York", "Paris", "London", "Tokyo",  
              "Rio de Janeiro", "Cape Town")  
  
> unlist(lapply(cities, nchar))  
[1]  8  5  6  5 14  9
```

Oil

```
> oil_prices <- list(2.37, 2.49, 2.18, 2.22, 2.47, 2.32)
> triple <- function(x) {
  3 * x
}
> result <- lapply(oil_prices, triple)
> str(result)
List of 6
 $ : num 7.11
 $ : num 7.47
 $ : num 6.54
 $ : num 6.66
 $ : num 7.41
 $ : num 6.96
> unlist(result)
[1] 7.11 7.47 6.54 6.66 7.41 6.96
```

Oil

```
> oil_prices <- list(2.37, 2.49, 2.18, 2.22, 2.47, 2.32)
> multiply <- function(x, factor) {
  x * factor
}

> times3 <- lapply(oil_prices, multiply, factor = 3)
> unlist(times3)
[1] 7.11 7.47 6.54 6.66 7.41 6.96

> times4 <- lapply(oil_prices, multiply, factor = 4)
> unlist(times4)
[1] 9.48 9.96 8.72 8.88 9.88 9.28
```

INTERMEDIATE R

Let's practice!

INTERMEDIATE R

sapply

lapply()

- Apply function over list or vector
- Function can return R objects of different classes
- List necessary to store heterogeneous content
- However, often homogeneous content

Cities: lapply()

```
> cities <- c("New York", "Paris", "London", "Tokyo",  
              "Rio de Janeiro", "Cape Town")
```

```
> result <- lapply(cities, nchar)
```

```
> str(result)
```

```
List of 6
```

```
$ : int 8
```

```
$ : int 5
```

```
$ : int 6
```

```
$ : int 5
```

```
$ : int 14
```

```
$ : int 9
```

```
> unlist(lapply(cities, nchar))
```

```
[1] 8 5 6 5 14 9
```

Cities: sapply()

```
> cities <- c("New York", "Paris", "London", "Tokyo",  
             "Rio de Janeiro", "Cape Town")  
  
> unlist(lapply(cities, nchar))  
[1] 8 5 6 5 14 9  
  
> sapply(cities, nchar)  
New York    Paris    London    Tokyo    Rio de Janeiro    Cape Town  
      8         5         6         5             14         9  
  
> sapply(cities, nchar, USE.NAMES = FALSE)  
[1] 8 5 6 5 14 9
```

USE.NAMES is TRUE by default

Cities: sapply()

```
> first_and_last <- function(name) {  
  name <- gsub(" ", "", name)  
  letters <- strsplit(name, split = " ")[[1]]  
  c(first = min(letters), last = max(letters))  
}  
  
> first_and_last("New York")  
first last  
"e"    "y"  
  
> sapply(cities, first_and_last)  
      New York Paris London Tokyo Rio de Janeiro Cape Town  
first "e"      "a"  "d"   "k"   "a"              "a"  
last  "y"      "s"  "o"   "y"   "R"              "w"
```

Unable to simplify?

```
> unique_letters <- function(name) {  
  name <- gsub(" ", "", name)  
  letters <- strsplit(name, split = " ")[[1]]  
  unique(letters)  
}  
  
> unique_letters("London")  
[1] "L" "o" "n" "d"
```

Unable to simplify?

```
> lapply(cities, unique_letters)
[[1]]
[1] "N" "e" "w" "Y" "o" "r" "k"

[[2]]
[1] "P" "a" "r" "i" "s"

[[3]]
[1] "L" "o" "n" "d"

[[4]]
[1] "T" "o" "k" "y"

...
```

```
> sapply(cities, unique_letters)
$`New York`
[1] "N" "e" "w" "Y" "o" "r" "k"

$Paris
[1] "P" "a" "r" "i" "s"

$London
[1] "L" "o" "n" "d"

$Tokyo
[1] "T" "o" "k" "y"

...
```

sapply did not simplify
Can be dangerous!

INTERMEDIATE R

Let's practice!

INTERMEDIATE R

vapply

Recap

- **lapply()**
apply function over list or vector
output = list
- **sapply()**
apply function over list or vector
try to simplify list to array
- **vapply()**
apply function over list or vector
explicitly specify output format

sapply() & vapply()

```
> cities <- c("New York", "Paris", "London", "Tokyo",  
              "Rio de Janeiro", "Cape Town")  
  
> sapply(cities, nchar)  
New York      Paris      London      Tokyo      Rio de Janeiro      Cape Town  
      8           5           6           5           14           9
```

```
vapply(X, FUN, FUN.VALUE, ..., USE.NAMES = TRUE)
```

```
> vapply(cities, nchar, numeric(1))  
New York      Paris      London      Tokyo      Rio de Janeiro      Cape Town  
      8           5           6           5           14           9
```

vapply()

```
> first_and_last <- function(name) {  
  name <- gsub(" ", "", name)  
  letters <- strsplit(name, split = " ")[[1]]  
  return(c(first = min(letters), last = max(letters)))  
}  
  
> sapply(cities, first_and_last)  
      New York Paris London Tokyo Rio de Janeiro Cape Town  
first "e"      "a"  "d"   "k"   "a"              "a"  
last  "Y"      "s"  "o"   "y"   "R"              "w"  
  
> vapply(cities, first_and_last, character(2))  
      New York Paris London Tokyo Rio de Janeiro Cape Town  
first "e"      "a"  "d"   "k"   "a"              "a"  
last  "Y"      "s"  "o"   "y"   "R"              "w"
```

vapply() errors

```
> vapply(cities, first_and_last, character(2))
      New York Paris London Tokyo Rio de Janeiro Cape Town
first "e"      "a"  "d"   "k"   "a"              "a"
last  "y"      "s"  "o"   "y"   "R"              "w"
```

```
> vapply(cities, first_and_last, character(1))
Error in vapply(cities, first_and_last, character(1)) :
  values must be length 1,
  but FUN(X[[1]]) result is length 2
```

```
> vapply(cities, first_and_last, numeric(2))
Error in vapply(cities, first_and_last, numeric(2)) :
  values must be type 'double',
  but FUN(X[[1]]) result is type 'character'
```

unique_letters()

```
> unique_letters <- function(name) {  
  name <- gsub(" ", "", name)  
  letters <- strsplit(name, split = " ")[[1]]  
  unique(letters)  
}
```

vapply() > sapply()

```
> sapply(cities, unique_letters)
$`New York`
[1] "N" "e" "w" "Y" "o" "r" "k"
```

```
...
```

```
$`Cape Town`
[1] "C" "a" "p" "e" "T" "o" "w" "n"
```

vapply() is safer than sapply()!

```
> vapply(cities, unique_letters, character(4))
Error in vapply(cities, unique_letters, character(4)) :
  values must be length 4,
  but FUN(X[[1]]) result is length 7
```

INTERMEDIATE R
